

## 3D PIPE DESIGN

- > Custom designed piping layouts.
- > The creation of complex three-dimensional designs can reduce manufacturing costs and installation time.
- > Piping design starting from P&IDs through to detail drawings of each spool.
- > Piping models give accurate three-dimensional visualisation of the final design.
- > Complex arrangements can be created for confined spaces which wouldn't otherwise be possible, minimising fittings and pipe length.
- > Three-dimensional piping allows for efficient layout and spacing of pipes and fittings in the space available.
- > High-quality representations can be produced.

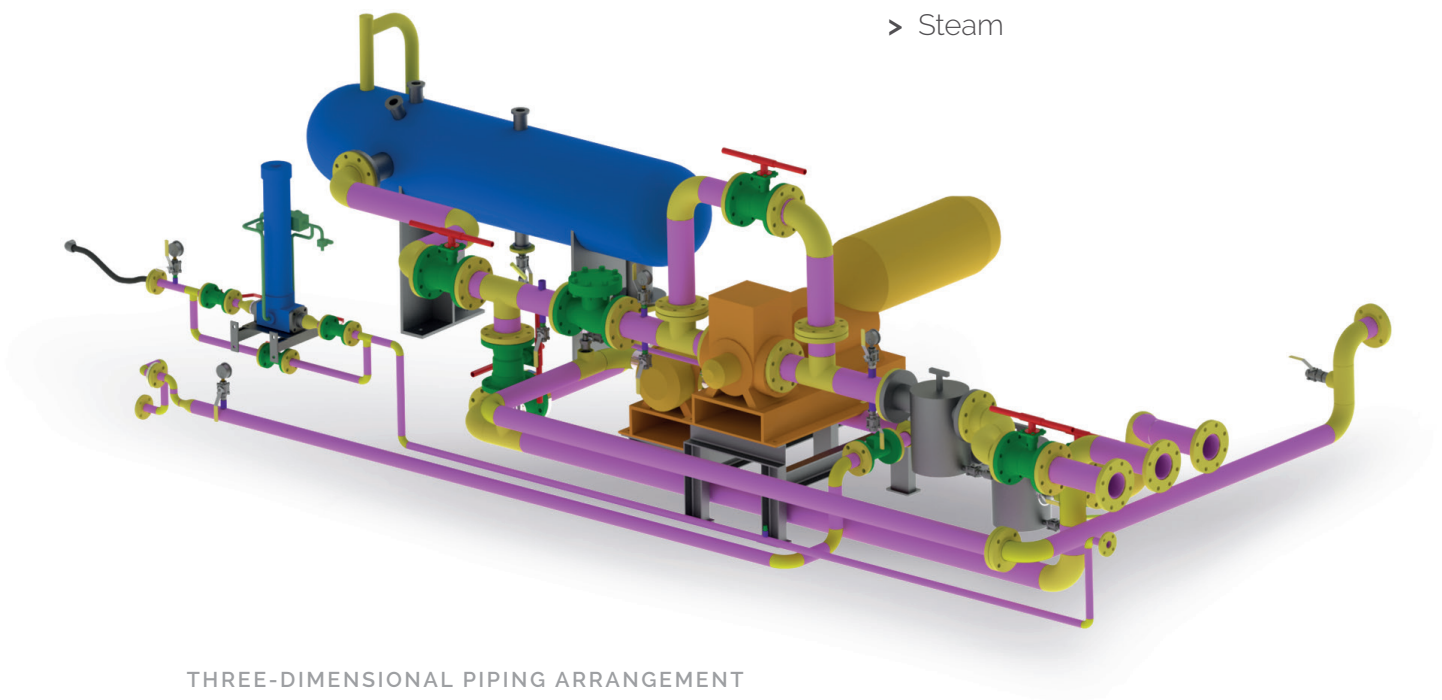

IN-CONTEXT PIPING ARRANGEMENT

## PIPING APPLICATIONS

Fully detailed pipe arrangements can be modelled for small scale equipment design up to full plant layouts in applications such as:

- > Water and sewage
- > Oil and gas
- > Steam

THREE-DIMENSIONAL PIPING ARRANGEMENT
